The Tankless

Standard Condensing Tankless

Dependable High Efficiency Tankless Water Heater

Dependable and efficient hot water is available for all with our high efficiency, standard condensing tankless water heater. Integrated Scale Prevention Technology, and topped off with an extremely efficient ENERGY STAR® performance all packaged to meet your customer's needs. What's more, never worry about descaling maintenance with Scale Prevention Technology.

Virtually Maintenance Free with Scale Prevention Technology:

- Units maintain like-new performance longer and life extended by up to 3x versus unprotected units
- Eliminates need for annual descaling

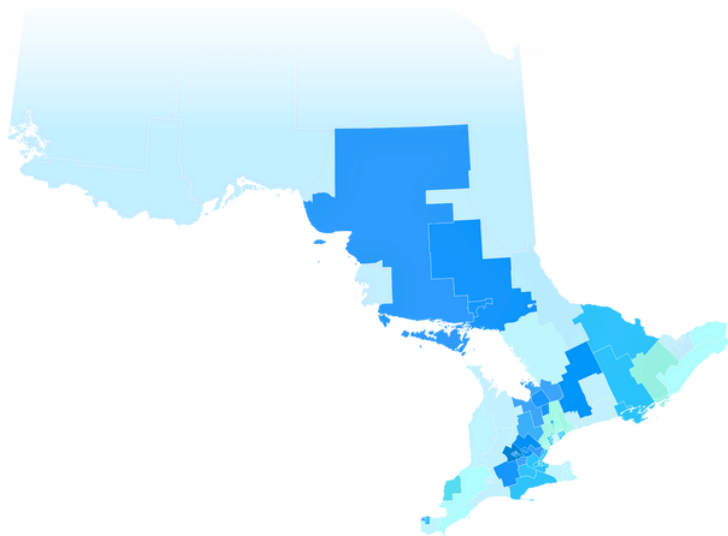

PERFORMANCE & EFFICIENCY

- 199,000 Btu 10,000 btu min input
- Max Flow Rate 10.5 GPM; 0.4 GPM activation; 0.26 GPM for continuous fire
- 0.95 UEF, ENERGY STAR® certified
- Ultra Low NOx

WARRANTY

- No hard water exclusions
- 15-year limited warranty on heat exchanger in residential applications
- 5-year limited warranty on all parts in residential applications
- 1-year limited warranty on heat exchanger and parts in commercial applications

Year After Year

the Tankless

Tank Vs Tankless

High Hot Water Usage

Every year Ontario Home owners spend \$400 to \$600, on average, to heat water for bathing, washing & cleaning.*

TANK WATER HEATERS

Traditional hot
water storage
tank system

VS
Over 20
Years

TANKLESS WATER HEATERS

Continuous hot water
heater system

• EFFICIENCY •

Tank water heaters are **susceptible to standby heat loss** and a continuously heated tank means water is heated all day long, 24/7, **for less efficiency.**

Tankless water heaters are **much more energy efficient**; no hot water is stored.

24-34% more efficient than tanks.

• COST •

Tank water heaters have a lower purchase price but are **more expensive to operate** since they must constantly keep water heated 24/7.

Tankless water heaters have **lower operational costs** and **last much longer than tank water heaters**, which can offset installation costs.

• LIFESPAN •

Traditional tank water heaters have a **lifespan of 10-15 years.***

With periodic maintenance, tankless water heaters can **last for 20+ years.***

• SIZE • SPACE •

Traditional tank water heaters **require much more area** for installation than tankless units potentially reducing net living or storage space.

Tankless water heaters are about the **size of a small suitcase** and are wall mounted for significant space savings.

• BOTTOM LINE •

- Heats water even when not being used
- Takes up valuable space
- Shorter lifespan
- 40-60 gallon capacity

- Up to 34% more energy efficient*
- Compact space saving design
- Longer lifespan
- Unlimited hot water capacity
